

Nothing wrong with the top bar, all I see are UI improvements

This is a lot of space, I'm sure there is a better use for it by including another use case

This search functionality, and the whole top UI of this section in general feels invisible, I have to use a lot of mental energy to figure out if theres anything useful here

This is a ton of space to only have the users library, just including the most popular part of the library and adding more use cases would be beneficial

The lyrics overlay is a huge hit on mobile, seems like wasted potential to make it a whole separate screen on desktop when there is a lot of space for it

The functionality of the footer is fine, but like mobile a simple background change would make a world of difference.
