

UI changes to the top bar to match the rest of the app

Reduced the space of “latests” section. Replaced with a “trending with friends” section. This adds another use case to the home screen, and a dynamic way to personalize Spotify to the user while upping its capability as a social network

The pinned, filter, and search UI has been changed to pop out more, now the functionality is more intuitive and the user can immediately tell what everything is/does

Top 3 artists section added, adding a popular use case and dynamic immersion and experience

Everything in library is replaced with a top 6 playlists section, maximizing most popular use case while saving room for others

Album background added to the “is playing” widget, increasing immersion and INDIVIDUAL experience

Added lyrics overlay, easy interactive component to increase immersion
